Dr Srishti Mishra

MBBS | MD Community Medicine

Community Medicine Physician | Clinical AI and Digital Health | Epidemiology

Ahmedabad, Gujarat, India | srshtm97@gmail.com | www.drsrishti.in

Professional summary

MD Community Medicine physician with patient-care experience since 2021 and 18 months of clinical AI product-development and evaluation experience. Clinical product lead for Saptrishi Medical AI, collaborating with engineers and a psychologist on a production health-report interpretation and longitudinal monitoring product. Experience includes clinical requirements, output evaluation, wearable follow-up, and an exploratory haemoglobin biomarker study using 79 paired observations. Four published papers and four accepted manuscripts.

Core skills

Clinical AI product evaluation; diagnostic-model validation; held-out evaluation; error, bias and artefact analysis; clinical product requirements; human-in-the-loop review; clinical safety boundaries; longitudinal health data; epidemiology and biostatistics; subgroup evaluation planning; data curation and validation; patient communication.

Clinical AI and digital health experience

Saptrishi Medical AI

Clinical product lead | Production product development and evaluation | 18 months, ongoing

- Originated and led the clinical product design, collaborating with engineers and a psychologist to bring Saptrishi Medical AI into production. Defined workflows that digitise laboratory reports, ECGs, treadmill tests and spirometry into traceable longitudinal health profiles.
- Defined clinical interpretation and evaluation criteria for ECG/TMT analysis, including signal quality, artefacts, exercise capacity and comparison with source traces; worked with engineers on implementation and with a psychologist on behavioural context and follow-up.
- Reviewed de-identified test cases for transcription errors, missing medication context, non-comparable measurements and interpretation discordance. Established source traceability, uncertainty labels and clinician review before patient-facing guidance.
- Used longitudinal findings to inform clinician-reviewed lifestyle and follow-up guidance alongside ongoing care. Added Google Health/Fitbit data for subsequent activity, sleep, heart-rate and restlessness monitoring; laboratory and treadmill measurements remained sourced from clinical reports.
- Documented individual case trajectories: HbA1c 6.90% to 5.80% (Jan-Jul 2026); report-listed treadmill workload 5.6 to 9.6 METs (Apr 2024-Nov 2025), with lower workload at later follow-up. In the same case, mean wearable restlessness was 23.2% lower across 33 baseline and 20 follow-up nights; other sleep measures were mixed.
- In a separate asthma case, tracked reported walking of 2 km without breathlessness and intermittent inhaler use. Reviewed corticosteroid exposure and treatment tolerability, distinguishing patient-reported function and medication use from objective respiratory measurements.

Image-based haemoglobin biomarker feasibility study

Clinical evaluation lead | Retrospective exploratory dataset | 79 paired observations

- Evaluated lip and tongue image features against recorded Hb labels spanning 8.20 to 15.20 g/dL using patient-grouped five-fold validation, capture-day holdout, bootstrap confidence intervals, MAE, bias, and limits of agreement.
- Found that the strongest exploratory feature achieved a patient-grouped MAE of 1.27 g/dL versus 1.28 for a mean-Hb baseline, without clear improvement. Recommended no patient-facing model rather than overstating an inconclusive result.
- Identified lighting, capture-day effects, anatomy selection, unverified labels and identities, limited low-Hb representation, and missing demographic metadata as validity risks. Designed a prospective 150-adult protocol with same-day CBC, age, sex, pregnancy, device and capture metadata, rejection rates, sensitivity and specificity, and subgroup reporting.

Professional experience

Senior Resident in Community Medicine | Oct 2026 - Present
SBKS MIRC, Sumandeep Vidyapeeth

- Supports field-practice supervision, clinical teaching, research, and public health programmes.

Junior Resident in Community Medicine | Oct 2023 - Oct 2026
SBKS MIRC, Sumandeep Vidyapeeth

- Combined rural, urban, and district patient care with epidemiology, biostatistics, and research; contributed household assessment, counselling, and follow-up through the Family Adoption Programme.

Clinical Doctor and Medical Officer | Aug 2022 - Aug 2023
Sterling Hospital, Gurukul, Ahmedabad

- Provided clinical care, documentation, patient coordination, and emergency-response support within multidisciplinary teams.

Rotatory Intern | May 2021 - May 2022
JSS Medical College, Mysore

- Completed hospital and community rotations, including adult medicine, paediatrics, emergency care, and COVID-19 care.

Education

MD Community Medicine | SBKS MIRC, Sumandeep Vidyapeeth | Oct 2023 - Oct 2026
MBBS | JSS Medical College, Mysore | Sep 2016 - May 2022

Relevant training

3rd Winter Epidemiology School, AIIMS Nagpur: regression analysis and quantitative bias analysis. Basic Course in Biomedical Research (BCBR).

Geriatric and population health research

- Contributed data curation, validation, investigation, and manuscript review to a study of 380 older adults with chronic illness, examining healthcare utilisation, follow-up, and financial burden.
- Co-authored qualitative research on post-pandemic healthcare-seeking and a study of 102 postmenopausal women across rural and urban settings, adding life-stage, geographic, behavioural, and access-to-care context to her digital-health work.

Selected publications

Co-author of the following work. Published and accepted status shown for each.

1. Healthcare utilisation, routine healthcare follow-up, and financial burden among older adults with chronic illness in western India. *Clinical Epidemiology and Global Health. 2026;42:102486. Published.* doi:10.1016/j.cegh.2026.102486

2. Perceived changes in health-seeking behaviour following the COVID-19 pandemic: A qualitative study of urban and rural populations in eastern Gujarat. *Cureus. 2026;18(10):e117837. Published.* doi:10.7759/cureus.117837

3. Healthcare-seeking behavior and associated factors among postmenopausal women in rural and urban areas of eastern Gujarat: A community-based study. *Journal of Mid-life Health. 2026. Accepted.* doi:10.4103/jmh.jmh_121_26

4. Geriatric health care in rural setting: A community-based case report of an older adult with hypertension. *International Journal of Community Medicine and Public Health. Accepted 27 Apr 2026.*
