Dr Srishti Mishra

MBBS | MD Community Medicine

Community Medicine Physician | Clinical AI and Digital Health | Epidemiology

Ahmedabad, Gujarat, India | srshtm97@gmail.com | www.drsrishti.in

Professional summary

MD Community Medicine physician with patient-care experience since 2021 and 18 months in clinical AI product development and evaluation. Clinical product lead for Saptrishi Medical AI, working with engineers and a psychologist from clinical requirements to production and longitudinal monitoring. Research includes a 79-observation haemoglobin biomarker feasibility study, four published papers and four accepted manuscripts.

Core skills

Clinical product leadership; AI evaluation and held-out validation; error, bias and artefact analysis; clinical requirements; human-in-the-loop review; longitudinal health data; epidemiology and biostatistics; subgroup evaluation planning; data quality; patient communication.

Clinical AI and digital health experience

Saptrishi Medical AI

Clinical product lead | Production product development and evaluation | 18 months, ongoing

- Originated and led the clinical design of Saptrishi Medical AI from concept to production, collaborating with engineers and a psychologist. Built the clinical workflow from report digitisation and longitudinal trend review to clinician-reviewed guidance and follow-up.
- Translated laboratory, ECG, treadmill and spirometry findings into requirements for clinical interpretation, artefact detection and follow-up priorities. Partnered with engineers on implementation and with a psychologist on behavioural context and personalised support.
- Evaluated AI outputs against source records and clinical context, reviewing transcription accuracy, medication history, measurement comparability and interpretation. Established traceability and clinician review to support reliable patient-facing guidance.
- Connected the medical AI workflow to longitudinal outcome review: clinical reports supplied HbA1c and treadmill measures, while subsequent Google Health/Fitbit monitoring tracked activity, sleep, heart rate and restlessness. Used these complementary records to inform clinician-reviewed lifestyle and follow-up guidance alongside ongoing care.
- Documented individual case trajectories: HbA1c 6.90% to 5.80% (Jan-Jul 2026); report-listed treadmill workload 5.6 to 9.6 METs (Apr 2024-Nov 2025), with lower workload at later follow-up. In the same case, mean wearable restlessness was 23.2% lower across 33 baseline and 20 follow-up nights; other sleep measures were mixed.
- Followed a separate asthma case through guided care, documenting reported walking of 2 km without breathlessness, non-use of previously scheduled respiratory treatment and intermittent inhaler use. Retained corticosteroid exposure and treatment-tolerability history for clinical review; medication use and functional gains were patient-reported.

Image-based haemoglobin biomarker feasibility study

Clinical evaluation lead | Retrospective exploratory dataset | 79 paired observations

- Led feasibility evaluation of image-based haemoglobin estimation for potential early anaemia screening, analysing lip and tongue features across 79 paired observations with recorded Hb labels of 8.20-15.20 g/dL. Applied patient-grouped five-fold validation, capture-day holdout, bootstrap confidence intervals, bias and agreement analysis.
- Benchmarked the strongest exploratory feature against a mean-Hb baseline: held-out MAE 1.27 versus 1.28 g/dL. Used the comparable performance and capture-related errors to define model-development priorities and evidence requirements before clinical deployment.
- Designed a prospective 150-adult validation protocol with same-day CBC, age, sex, pregnancy, device and capture metadata, sensitivity/specificity, rejection rates and subgroup reporting. This planned phase addresses demographic and clinical variation not established in the retrospective dataset.

Professional experience

Senior Resident in Community Medicine | Oct 2026 - Present
SBKS MIRC, Sumandeep Vidyapeeth

- Supports field-practice supervision, clinical teaching, research, and public health programmes.

Junior Resident in Community Medicine | Oct 2023 - Oct 2026
SBKS MIRC, Sumandeep Vidyapeeth

- Combined rural, urban, and district patient care with epidemiology, biostatistics, and research; contributed household assessment, counselling, and follow-up through the Family Adoption Programme.

Clinical Doctor and Medical Officer | Aug 2022 - Aug 2023
Sterling Hospital, Gurukul, Ahmedabad

- Provided clinical care, documentation, patient coordination, and emergency-response support within multidisciplinary teams.

Rotatory Intern | May 2021 - May 2022
JSS Medical College, Mysore

- Completed hospital and community rotations, including adult medicine, paediatrics, emergency care, and COVID-19 care.

Education

MD Community Medicine | SBKS MIRC, Sumandeep Vidyapeeth | Oct 2023 - Oct 2026
MBBS | JSS Medical College, Mysore | Sep 2016 - May 2022

Relevant training

3rd Winter Epidemiology School, AIIMS Nagpur: regression analysis and quantitative bias analysis. Basic Course in Biomedical Research (BCBR).

Geriatric and population health research

- Contributed data curation, validation, investigation, and manuscript review to a study of 380 older adults with chronic illness, examining healthcare utilisation, follow-up, and financial burden.
- Co-authored qualitative research on post-pandemic healthcare-seeking and a study of 102 postmenopausal women across rural and urban settings, adding life-stage, geographic, behavioural, and access-to-care context to her digital-health work.

Selected publications

Co-author of the following work. Published and accepted status shown for each.

1. Healthcare utilisation, routine healthcare follow-up, and financial burden among older adults with chronic illness in western India. *Clinical Epidemiology and Global Health. 2026;42:102486. Published.* doi:10.1016/j.cegh.2026.102486

2. Perceived changes in health-seeking behaviour following the COVID-19 pandemic: A qualitative study of urban and rural populations in eastern Gujarat. *Cureus. 2026;18(10):e117837. Published.* doi:10.7759/cureus.117837

3. Healthcare-seeking behavior and associated factors among postmenopausal women in rural and urban areas of eastern Gujarat: A community-based study. *Journal of Mid-life Health. 2026. Accepted.* doi:10.4103/jmh.jmh_121_26

4. Geriatric health care in rural setting: A community-based case report of an older adult with hypertension. *International Journal of Community Medicine and Public Health. Accepted 27 Apr 2026.*
